SUBJECT INDEX

Abortive regeneration 389, 397
Activin receptor-like kinases (ALK), cDNA cloning 59–65
Activin receptor type II, structure 58, 59, 61–65
Activins 56, 57, 101
Angiogenesis, VEGF 93
Angiogenic factors
  corpus luteum 167
  scar formation 389
Angiotensin II
  biosynthesis 178
  cell proliferation and growth 183
  regulation of gene expression 181
  signalling 179
Angiotensin II receptors 182
Apoptosis, primordial germ cells 141
Astrocytes, CNS injury and repair 396
ATF2, MAP kinase 314
Autocrine motility factor (AMF), cell migration 226
Autotaxin, cell migration 226
Axon regeneration 396

Blood–brain barrier, CNS injury 382
Bone, TGFβ superfamily 101
Bone morphogenetic proteins (BMPs) 56, 101, 102
  related genes 109, 110
Bootstrap analysis, TGFβ 106, 109
Brain-derived neurotrophic factor (BDNF)
  nigrostriatal dopaminergic system 76
  sensory neuron development 265–283

Calcium
  angiotensin II and tyrosine kinase 180
  neurotrophins and sensory neurons 273, 274
Cancer, FGF genes 10
Cardiac myocytes, nitric oxide production, suppression by TGFβ 345
Cartilage-Inducing Factor-A/B (CIF-A/B) 101
CD44, cell migration 232
Cell differentiation
  FGF6 11
  sensory neuron precursors, neurotrophins 269
Cell migration, cytokine–matrix interaction 223–241
  migration assays 224
Cell proliferation
  angiotensin II 183
  corpus luteum 160, 163, 165
  FGFs 9
  primordial germ cells 139
  sensory neurons, neurotrophins 269
Center for Biologics Evaluation and Research (CBER), clinical applications for cytokines and growth factors 214–222
Chemokinesis, cytokines and matrix macromolecules 224
Chemotaxis, cytokines and matrix macromolecules 224
Chemotrophic growth factors, primordial germ cells 136
Chondroitin-6-sulphate proteoglycan, CNS injury 386
Ciliary neurotrophic factor (CNTF)
  CNS repair 398
  nigrostriatal dopaminergic system 80
Ciliary neurotrophic factor receptor 18
  activation 20
c-*jun*, MAP kinases 312
c-*kit* receptor
  primordial germ cell migration 136
  primordial germ cell proliferation 139
Clinical development, cytokines and growth factors 213–222
c-*myc*, MAP kinase 314
CNS injury, growth factors in repair and regeneration 379–405
Complementation, MAP kinase 320
Corpus luteum 159
  growth and development 160
  growth regulators 164–171
CREB 314
Cutaneous sensory neurons, neurotrophins 282
Cyclic AMP
  MAP kinase activation 306
  primordial germ cell proliferation 140
Cytokine receptors 16
  signal transduction 20–28, 196
Cytokines
  cell migration 223–241
    hyaluronic acid interaction 236
    modulation by matrix molecules 233–241
  clinical applications, regulations 213–222
  CNS repair and regeneration 380, 384
  haemopoiesis 15
  nitric oxide expression 342, 343
  Parkinson's disease 80
Cytoskeleton, targets for MAP kinase 316
Cytotactin/tenascin, CNS injury 396

Daf-1
  cDNA cloning 58, 59
  structural comparisons 61
Development
  corpus luteum 160

FGFs and FGFRs in skeletal muscle 7, 148
haemopoietic receptors and signal transduction 27
sensory neurons, neurotrophins 263–283
Differentiation inhibitor (DI) 101
Dopaminergic neurons, growth factors in Parkinson's disease 73, 76
Dorsalin-1 101
Dual-receptor system, FGFs 362
Duchenne Muscular Dystrophy 153

Elkl, MAP kinase 314
Embryo implantation, angiogenesis and VEGF 93
Embryonal germ cells 141
Embryonic neurons, neurotrophins 274
Endothelial cells
CNS injury 384
corpus luteum, mitogenic factors 167
VEGF 90, 92
Epidermal growth factor (EGF)
bibliography 249–261
cell migration 226, 236, 237
MAPK regulation 304
nigrostriatal dopaminergic system 79
Epidermal growth factor receptor, MAP kinase interaction 309
ERK 292, 295, 297, 302, 305, 309, 322
Erythropoietin receptor 19
ligand activation 20
SN2 association 22
signal transduction 24, 26, 27
Establishment License Application 214, 219
Estrous cycle
luteal growth and development 160, 161
luteal mitogens 167
Ets oncoprotein family, MAP kinase 314
Excitatory amino acids, in CNS injury 385, 394
Excitotoxicity 394
Extracellular matrix, cytokine control of cell motility 223–241

FARl, MAP kinase 315, 323
Fertility, luteal growth and development 160
Fibroblast growth factors (FGFs) 1, 146, 354
binding to receptors 360
cell migration 226
developing skeletal muscle 148
dual-receptor system 362
extracellular, uptake 366
mRNAs encoding 355
nigrostriatal dopaminergic neurons, Parkinson's disease 77
regulation in myogenesis 149–153
release from cells 359
stimulation of intracellular events 367
structure 355
Fibroblast growth factor 2 (FGF2)
angiogenesis in corpus luteum 167
CNS repair and regeneration 380, 386, 387, 394, 398
Fibroblast growth factor 4 (FGF4) 3, 5, 6
Fibroblast growth factor 4 gene, expression in muscle 9
Fibroblast growth factor 6 (FGF6)
cell growth and differentiation 9
in vitro activity of protein 10
receptor binding 6
Fibroblast growth factor 6 genes
expression 7
structure 2, 3
transforming capacity 9
Fibroblast growth factor 6 gene products 4
Fibroblast growth factor receptors (FGFR) 4, 146, 356
in developing skeletal muscle 148
dual system 363
FGF binding 6, 360
Fibrogenic factors, CNS injury and repair 397
Fibronectin
cell motility 229
modulation of cytokine mitogenic activity 233
flt, VEGF receptor 91
Food and Drug Administration (FDA), cytokines and growth factors 213

GAP
haemopoietic receptors and signal transduction 23
PDGF receptor binding 22, 43
Geniculate neurons, neurotrophins 272
Glial cell line-derived neurotrophic factor (GDNF) 57
Glial inhibitory factors, CNS injury 395
Glutaredoxins 113
GM1, effect on nigrostriatal system 81
G proteins, MAP kinase activation 301
Granulocyte–macrophage colony stimulating factor (GM-CSF), cell migration 226
Granulocyte–macrophage colony stimulating factor receptor 16
associated tyrosine kinases 21
signal transduction 21, 23, 26, 27
Growth/differentiation factor (GDF) 101
Growth factor receptor-bound protein 2 (GRB2), PDGF receptor binding 47
Growth hormone, receptor activation 20
Gustatory neurons, neurotrophins 283

Haematopoietic growth factors, cell migration 226
Haematopoietic receptors 196
activation 20
mutational analysis 26
SH2 containing proteins 22
signalling 20–28
signal transduction, tyrosine kinase 197–208
JAK 203
structure 16
tyrosine phosphorylation 21
Haemopoiesis
cytokines 15
signalling during development 27

Haemorrhage, CNS injury 382
Heparan sulphate, FGF interaction 358, 363
Heparan sulphate proteoglycans, FGF receptors 358, 361
Heparin, VEGF interaction 90, 92
Hepatocyte growth factor, bibliography 407–412
Hyaluronic acid
  motogenic activity 232
  effect on motogenic activity of cytokines 236

Inflammation
  CNS injury 384
  nitric oxide and TGFβ 346
Inhibins 57, 101
Insulin-like growth factors (IGFs)
  CNS repair and regeneration 381
  nigrostriatal system 79
Integrins, cell motility 229
Interferonγ (IFNγ)
  nitric oxide production in macrophages 344
  Parkinson's disease 80
Interleukins
  cell migration 226
  neurotrophic effects, Parkinson's disease 80
Interleukin-1(IL-1), CNS injury 385, 386
Interleukin-2(IL-2), receptors 196
  SH2 association 22
  signal transduction 24, 26
  tyrosine kinases 21, 197–208
    JAK 203
Interleukin-3(IL-3) receptors 16
  activation 21
  signal transduction 23
Interleukin-4(IL-4) receptor 19
  SH2 association 22
Interleukin-5(IL-5) receptors 16
  signal transduction 24
Interleukin-6(IL-6), motogenic activity and effect on cell–matrix interactions 236
Interleukin-6(IL-6) receptor 18
  ligand activation 20
  signal transduction 20
Interleukin-7(IL-7) receptor 20
Interleukin-9(IL-9) 19
Interleukin-13(IL-13) receptor 19
Investigational New Drug (IND) 215
IRS-1 22

Janus Kinase(JAK), haematopoietin receptors, signal transduction 203

KDR/flk-I gene, VEGF receptor 91

L1 397
Laminin, axon regeneration 396
Lamins, MAP kinase interaction 316
Latent cytoplasmic transcription factor 208
Leukemia inhibitory factor (LIF), primordial germ cell growth 139, 140
Leukemia inhibitory factor receptors 18
  activation 20
Luteinizing hormine, luteal growth 165

Macrophage-inhibitory factor (MIF) 395
Macrophage stimulating factors 395
Macrophages
  CNS injury 384
  nitric oxide production, suppression by TGFβ 344
MAP kinases(MAPK) 181, 291, 292
  agonists 293, 294
  heterologous complementation 320
  interconnecting networks upstream 301, 303
  mammalian 293
  mutations 317
  non-mammalian 295
  oncogenic potential 322
  regulation 304
  response to cytokines 24
  targets
    cytoskeleton 316
    cytosolic 309
    nuclear 312
MAP kinase-activated protein kinase(MAPKAP kinase) 310
MAP kinase kinase(MAPKK) 292, 297, 310, 316
  heterologous complementation 320
  mutations 318
MAP kinase kinase kinase(MAPKKK) 292, 299, 316
  heterologous complementation 321
  mutations 318
mas/angiotensin II receptor 183
Matrix molecules
  cell migration 223, 228
  modulation of cytokine motogenic activity 232–241
Mechanoceptive neurons, neurotrophins 282
MEK 292, 297, 302, 305, 310, 316, 319, 321
MEK kinase 299
Metastasis 225
Microglia, CNS injury 384, 386
Microtubule-associated proteins, MAP kinase interaction 316
Migration assays 224
Migration stimulating factor(MSF) 226
  cell motility and hyaluronic acid interaction 236
Mitogen-activated protein kinases 181, 292
Mitogens, corpus luteum 164–171
Mos, MAP kinases 299
Motility factors 226
Müllerian inhibitory substance(MIS) 57, 101
Muscle
  skeletal
    differentiation 145
    FGF6 expression during development 7
    FGFs and myogenesis 148, 149–153
  vascular smooth, angiotensin II 184
Muscle-derived differentiation factor(MDF) 81
Muscle regulatory transcription factors, FGF 150

Myelin-associated glycoprotein(MAG), CNS injury 395
Myelin associated inhibitory factors, CNS injury 395
MyoD, FGF and myogenesis 151
Myogenesis 145
FGF 7, 149–153

Nerve growth factor(NGF)
bibliography 119–133
CNS repair and regeneration 381
MAPK regulation 304
neuron death 74
sensory neuron development 264–283
striatum 75, 76
TGFβ homology 113
Nerve growth factor receptor 266
MAPK interaction 309
Nerve regeneration 394
Neuronal degeneration, CNS injury 385
Neuronal development, neurotrophins 263–283
Neuron death 74
Neuropeptides, Parkinson's disease 81
Neurotensin, Parkinson's disease 81
Neurotrophic theory 264
Neurotrophin receptors 266
Neurotrophins 265
CNS repair and regeneration 381, 397
Parkinson's disease 75
sensory neuron development 264–283
Neurotrophin-3, proliferation and differentiation of sensory neuron precursors 269
NF-IL6 315
NHP6, MAP kinase 315
Nigrostriatal system, growth factors in Parkinson's disease 73
Nitric oxide, control by TGFβ 341–351
Nitric oxide synthase, control of expression by TGFβ 341–351
Nociceptive neurons, neurotrophins 280
Nodose neurons, neurotrophins 272, 274, 282
Nuclear translocation
aFGF 366
MAP kinases 312

Office of Therapeutics Research and Review(OTRR) 214
Oncogenes
FGF6 3
MAP kinase module 322
Oncostatin M(OM) receptor 18
Opening reading frame(ORF), FGF6 genes 3
Osteogenic proteins(OP) 56, 101

p53, MAP kinase 315
Parkinson's disease 73
CNTF 80
EGF 79
FGFs 77
GM1 81
IGFs 78
IFNγ 80
ILs 80
neuropeptides 81
neurotrophins 75
TGFα 79
TNFα 80
Petrosal neurons, neurotrophins 272
Phosphatases, MAP kinase regulation 307
Phosphatase 2C 312
Phospholipase A2, MAP kinase interaction 311
Phospholipase C-γ, PDGF receptor binding 45
Phylogenic tree, TGFβ superfamily 106
Pim-1 serine/threonine kinase, signal transduction, haemopoietic receptors 25
P13K 22
PDGF receptor binding 46
Placenta-derived growth factor(PLGF) 90
Platelet-derived growth factor(PDGF) 37
biological responses to stimulation 42
cell migration 226, 227, 228
CNS injury 383
receptor binding 39
VEGF 90
Platelet-derived growth factor receptors
autophosphorylation sites 41
binding components 43
ligand-induced dimerization, activation and regulation 39
PDGF stimulation 42
signal transduction 37–54
structure 38
VEGF receptors 91
Pregnancy
luteal growth and development 160, 161
luteal mitogens 167
Primordial germ cells, migration and proliferation 135–143
Product License Application 214, 219
Prolactin receptor, tyrosine kinases 197–208
JAK 203
Proprioceptive neurons, neurotrophins 281
Protamine kinase 311
PROTDIST 105, 109
Protein kinase A, MAP kinase regulation 306
Protein kinase C
MAP kinase regulation 305
responses to cytokines 25
PTD 1D 48
PTK72 21

Raf
MAP kinases 299, 305, 306, 310, 322
PDGF receptor interaction 48
Ramified microglia 384
Ras
cytokine receptors and signal transduction 24
MAP kinase 301, 306, 322
PDGF receptor binding 43
Ras–Raf interaction 301, 306, 324
Regeneration, CNS injury 390

Renin–angiotensin systems 178
Retinal pigment epithelial cells, nitric oxide production 345
Rhabdomyosarcoma 153
RHAMM, cell migration 232, 240

Sarcoma growth factor(SCF) 101
Scar formation 380, 386
Scatter factor(SF), cell migration 226
Sensory neurons
  death 278
  early maturation 270
  neurotrophins 264–283
  origins and development 263
  proliferation and differentiation of precursors 269
Serine/threonine kinase
  pim-1, hemopoietic receptors 25
  raf-1, PDGF receptor interaction 48
Serine/threonine kinase receptors 55–72
  identification and cDNA cloning 58
  signalling 65
  structures 61
  TGFβ superfamily 56
SH2 containing proteins
  haemopoietic receptors 22
  PDGF receptor binding 43
SH2-containing sequence(SHC) protein 48
Signal transduction
  angiotensin II 179
  FGF2 147
  haematopoietic receptors 20–28
    JAK-family tyrosine kinases 195–211
  neurotrophins 267, 268
  PDGF receptors 37–54
  serine/threonine kinase receptors 56, 65
  SF/HGF 226
Skeletal muscle
  differentiation 145
  FGF6 expression during development 7
  FGFs and myogenesis 148, 149–153
Skin, neurotrophins and sensory neurons 282
S6 kinase II, MAP kinase interaction 309
Somitigenesis, FGFR expression 148
SOS, MAP kinase interaction 306, 311
Src
  MAP kinase interaction 302
  PDGF receptor binding 46
Stathmin 311
STE 5 312
STE 12 315
Stem cell factor(SCF), primordial germ cell migration 136
Stem cell factor/c-*kit* receptor, primordial germ cell proliferation 138, 139
Stress-activated protein kinases(SAPK) 295
Substance P, Parkinson's disease 81
Syp 48

TAL1 315
Tanascin, cell migration 231
Thermoceptive neurons, neurotrophins 279
Transcription factors, MAP kinases 213
Transforming growth factor-α(TGFα)
  cell migration 237
    effect of hyaluronic acid 239
  nigrostriatal dopaminergic system 79
Transforming growth factor-β(TGFβ) 56, 99
  cell–matrix interactions 235
  cell migration 225–235
  chromosomal location of genes 102
  CNS repair and regeneration 380, 384, 397
  control of nitric oxide synthase 341–351
  evolution 103
  genes 110
  phylogenic tree 106
  species 100
  structurally related molecules 112
Transforming growth factor-β receptors
  cDNA cloning 59
  signal transduction 65
  structural comparisons 61–65
Transforming growth factors, bibliography 335–339
Traumatic CNS injury, growth factors in repair 379–405
Trk receptor tyrosine kinases, neurotrophin receptors 266
Tsk-7L 60, 61
Tuftsin 395
Tumour angiogenesis, VEGF 93
Tumour necrosis factor-α(TNFα), Parkinson's disease 80
Tumours, migration 225
Tyrosine hydroxylase, MAP kinase interaction 311
Tyrosine kinase
  activation by angiotensin II 179
  haematopoietic receptor signal transduction 197
    JAK 203
Tyrosine kinase receptors
  FGFs 356
  haematopoietic receptors and signal transduction 20, 21
  PDGF binding 39–48
  trk, neurotropin receptors 266

Vascular endothelial growth factor(VEGF)
  characterisation 89
  heparin interaction 90, 92
  receptors 90
Vascular permeability factor(VPF) 89
Vascular smooth muscle, growth promoting activity of angiotensin II 184
Vav, signal transduction 25
Vestibular neurons, neurotrophins 272
Vestibulo-acoustic neurons, neurotrophins 283
Visceral neurons, neurotrophins 282
VPS34 47

Wounding, growth factors in CNS repair and regeneration 379–405

ZAP 21
